DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, 29-31, drawn to a system for urging a sample well tray from a sample block, classified in class 422, subclass 102.
 - II. Claims 19-28, drawn to a heating apparatus for biological samples, classified in class 435, subclass 305.4.
 - III. Claims 32-38, drawn to a system for urging a sample well tray from a sample block, classified in class 436, subclass 47.
 - IV. Claim 39, drawn to an urging mechanism, classified in class 220, subclass 348.
- 2. The inventions are distinct, each from each other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system of urging of Group I does not require the specific cover means disclosed in Group II for patentability. The subcombination has separate utility such as a means to store liquids in a multi-well plate.

Inventions I and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require

Application/Control Number: 09/496,408

Art Unit: 1743

the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system of urging of Group I does not require the specific spring force disclosed in Group IV for patentability. The subcombination has separate utility such as a means for accurately positioning various sided sample tubes at a standard location, see Duckett *et al* (USP 5,378,433).

Inventions II and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group IV has separate utility such as a means for accurately positioning various sided sample tubes at a standard location, see Duckett *et al* (USP 5,378,433). See MPEP § 806.05(d).

Inventions III and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus, such as a micro-titer orbital shaking device or by hand.

This relationship is applicable to Groups III and II; III and IV.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for

Page 4

one group is not required for the others, restriction for examination purposes as indicated is

proper.

A telephone call was made to James Hammond on September 26, 2001 to request an oral 4.

election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an 5.

election of the invention to be examined even though the requirement be traversed (37 CFR

1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the 6.

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a petition under 37

CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the 7.

examiner should be directed to P. Kathryn Bex whose telephone number is (703) 306-5697. The

examiner can normally be reached on Mondays-Thursdays from 6:00 am to 3:30 pm EST.

Any inquiry of a general nature or relating to the status of this application should be directed

to the Group receptionist whose telephone number is (703) 308-0661.
